September 2006

P-80[®] IFC Temporary Assembly Lubricants Approved for Incidental Food Contact Applications

Burlington, New Jersey, USA: P-80[®] Emulsion, P-80 THIX, and P-80 Grip-it Temporary Assembly Lubricants from International Products Corporation have long been used by the automotive, appliance, and pump industries to ease assembly of tight-fitting parts such as o-rings, hoses, seals, grommets, bushings, hoses, and grips.

Now, the company introduces P-80 Emulsion IFC and P-80 THIX IFC Temporary Assembly Lubricants for Incidental Food Contact. The two new lubricants complement the industrial P-80 product line and expand use further into the pump, appliance and food processing industries. P-80 Emulsion IFC and P-80 THIX IFC meet FDA regulation 21 CFR 178.3570, which controls lubricants used in incidental food contact applications, and are registered with NSF International for meeting USDA H1 standards.

Like industrial P-80 products, P-80 IFC lubricants ease assembly operations by providing temporary lubrication that reduces the force needed for installation. By reducing the force needed for assembly, P-80 products help speed production while lowering the incidence of damaged parts and injury to workers.

In addition to its line of P-80 lubricants, IPC manufactures precision cleaners, which are widely used in the pharmaceutical, filtration, and laboratory industries. For further information or to request a sample, contact International Products Corporation, at 609-386-8770 or online at www.ipcol.com.
