IPC Meets the Needs of the Food and Beverage Industry

Burlington, New Jersey, USA: The food and beverage industry is one of the most demanding when it comes to quality control of both clean and contaminated areas. International Products Corporation (IPC) has the solutions to meet the needs of the food and beverage industry with their line of temporary rubber lubricants designed specifically for incidental food contact as well as NSF registered cleaners for a variety of applications from process equipment and labware to filter membranes.

P-80[®] Emulsion IFC and P-80[®] THIX IFC Temporary Assembly Lubricants for incidental food contact are used in the pump, appliance and food processing industries and meet FDA regulations which control lubricants used in incidental food contact applications. P-80[®] IFC lubricants ease assembly operations by providing temporary lubrication that reduces the force needed for tube or pipe installation. By reducing the force needed, P-80[®] products help speed production while lowering incidences of damaged parts and injury to workers.

IPC's line of aqueous cleaners include: Micro-90[®] a mild, yet powerful, multipurpose, alkaline cleaning concentrate that has long been used in laboratories, industrial applications, and critical cleaning processes; LF2100[®], a liquid low-foam alkaline cleaner for removal of fat, oil, grease, wax and particulates; Micro[®] A07, a citric acid cleaner with a blend of chelating citric acid and anionic surfactants for removal of scale, oxide, mineral deposits and other inorganic soils; Surface Cleanse/930[®], a concentrated neutral cleaner for use on delicate metals and other sensitive surfaces; Zymit[®], a low-foam dual enzyme and detergent formula for removal of starches, gelatin and proteins; and Zymit[®] Pro, a protease enzyme cleaner that does well with protein based soils in filter membranes. These non-toxic products can be used in food and beverage plants to remove fat, oil, grease and mineral deposits.

International Products Corporation specializes in the manufacture and distribution of environmentally-friendly specialty cleaners and temporary assembly lubricants at their ISO 9001-Certified facility in Burlington, New Jersey. Their state-of-the-art manufacturing, packaging, warehousing equipment and on-site laboratory are equipped for analytical work and continued development of products. Products are readily available worldwide through their network of global distributors. For more information or free samples, visit our website at www.ipcol.com or call us direct at 609-386-8770.
