IPC's P-80[®] Temporary Rubber Assembly Lubricants Ease Installation and Increase Output

Burlington, New Jersey, USA: A product's components must fit tightly in order to function properly. Low tolerance parts require great exertion for installation, often resulting in damaged parts and injured workers. P-80[®] solves this problem by providing temporary lubrication that eases assembly operations. P-80[®] products are widely used in the automotive, appliance, tool assembly, aircraft, marine and pump industries. Typical applications include the installation of o-rings, grommets, seals, bushings, and hoses. P-80[®] is available in industrial and incidental food contact formulas in a variety of sizes.

P-80[®] lubricants are safe to use on most natural and synthetic elastomers, metals, plastics and other materials. P-80[®] products are water-based, and do not contain alcohol or petroleum distillates, so they will not cause rubber to dry out or harden. P-80[®] products are non-toxic, non-flammable, easy to dispose of, and contain no silicon and negligible VOCs.

P-80[®] lubricants are available from International Products Corporation and include: P-80[®] Emulsion Temporary Rubber Assembly Lubricant, which has a milky consistency making it ideal for easing the assembly of o-rings, hoses, grommets and bushings. P-80[®] THIX Rubber Lubricant Gel is a thicker version of P-80[®] Emulsion that stays where it is applied without dripping and is especially useful for vertical or overhead applications. P-80[®] Grip-It Quick-Drying Temporary Lubricant dries quickly to allow the natural tight fit of rubber to return. P-80[®] Emulsion IFC and P-80[®] THIX IFC have similar lubricating properties as industrial P-80[®] Emulsion and P-80[®] THIX but are NSF registered as H1 lubricants and they meet FDA regulation 21 CFR 178.3570 allowing use in incidental food contact applications. **P-80 Emulsion and P-80 THIX are biodegradable.**

International Products Corporation specializes in the manufacture and distribution of environmentally-friendly temporary assembly lubricants and precision cleaners at their ISO 9001-Certified facility in Burlington, New Jersey. Their state-of-the-art manufacturing, packaging, warehousing equipment and on-site laboratory are equipped for analytical work and consultation on your assembly and cleaning processes. Products are readily available worldwide through their network of global distributors. For more information or free samples, visit our website at www.ipcol.com or call us direct at 609-386-8770.
