IPC Manufactures Safe and Effective Cleaners for Wastewater Facilities

Burlington, New Jersey, USA: International Products Corporation (IPC) is pleased to announce the use of their new concentrated cleaner Micro[®] A07 Citric Acid Cleaner in wastewater treatment plants. Micro-90[®] Concentrated Cleaning Solution and Micro[®] A07 are effective in removing suspended solids from wastewater treatment plants' effluent filters. Many wastewater treatment plants use tertiary filtration to remove solids from their effluent filters just before discharge. One facility used household bleach to clean filter panels and were looking for an environmentally friendly alternative. Their test using Micro-90[®] was a success. They found Micro-90[®] cleaned as well as the bleach, but Micro-90[®] did not corrode the filter frames or degrade the filter media.

Micro-90[®] is a mild, yet powerful, alkaline cleaner effective in industrial and critical cleaning applications. Its unique formulation of chelants, ionic, and non-ionic ingredients produces a variety of cleaning actions that include lifting, dispersing, emulsifying, sequestering, suspending, and decomposing. Target soils include oil, grease, wax, tar, flux, particulates, hard water stains, and biological debris.

Micro[®] A07 is a citric acid cleaner with a blend of chelating citric acid and anionic surfactants for removal of scale, oxide, mineral deposits, rust and other inorganic soils. Micro[®] A07 is biodegradable, phosphate free and non-corrosive.

Both Micro[®] A07 and Micro-90[®] are highly effective at defouling filter membranes and, depending upon the soils, can be used intermittently to provide ultimate cleaning results. When included as part of a preventive maintenance plan, the alternate use of Micro-90[®] and Micro[®] A07 rejuvenate UF membranes to their original flux.

Other cleaners from International Products Corporation include: LF2100[®], a liquid low-foam cleaner; Surface Cleanse/930[®], a concentrated neutral cleaner; Zymit[®], a low-foam dual enzyme and detergent formula; and Zymit[®] Pro, a protease enzyme cleaner. These non-toxic products can be used to remove many soils including oil, grease and mineral deposits.

International Products Corporation specializes in the manufacture and distribution of environmentally-friendly specialty cleaners and temporary assembly lubricants at their ISO 9001-Certified facility in Burlington, New Jersey. Their state-of-the-art manufacturing, packaging, warehousing equipment and on-site laboratory are equipped for analytical work and consultation on your cleaning processes. Products are readily available worldwide through their network of global distributors. For more information or free samples, visit our website at www.ipcol.com or call us direct at 609-386-8770.
