JUNE 2016 – MEDIA RELEASE

P-80® Lubricants are effective for Pump Seal Maintenance

Burlington, New Jersey, USA. One universal goal of treatment plant operators is to keep operations running smoothly and effectively at all times. While many factors contribute to achieving this goal, one simple way to help reach this objective is to perform regular equipment maintenance. Most plants use a variety of different types of pumps. Maintaining and replacing pump seals on a regular basis helps to ensure that systems continue to function efficiently, as planned.

Replacing standard pump components, such as seals, O-rings, and other rubber parts, can often lead to frustration because the slip resistant nature of rubber makes it difficult to install, cut, remove or manipulate. Repair and installation of rubber parts can take considerable physical effort and time. In addition, improper part alignment or installation can lead to part failure and safety issues.

Using the proper assembly lubricant can turn a difficult chore into an easy task. Many jobs can benefit from the reduced friction and increased safety provided by P-80® Temporary Rubber Assembly Lubricants.

P-80 lubricants are the perfect solution for pump and seal repairs, they have been used for years by treatment plant operators to maintain equipment and replace parts such as seals, O-rings, hoses, grommets, and plugs.

P-80 lubricants enable rubber parts to slide easily into place with minimal force. Once dry, P-80 stops lubricating and parts remain in place, resulting in a tight fit. Since P-80 does not contain silicon or any other persistent ingredients, once dry the slipping action goes away.

Advantages of using P-80 lubricants:

- Eases installation of rubber parts creating a tight fit.
- Reduces damage to parts.
- Temporary – Once dry the lubrication is gone.
- Alcohol free – will not dry out rubber or otherwise impair its performance.
- Safe and ready to use, requires no mixing.
- Silicon, Petroleum and Solvent Free.
- Compatible with most plastics, rubbers and metals.

P-80 is non-toxic and available in four different industrial formulas, as well as two special formulas that are registered with NSF as H1 lubricants approved for incidental food contact applications. Most P-80 products are biodegradable and all are manufactured in the USA.

About International Products Corporation: International Products Corporation (IPC), founded in 1923, manufactures specialty cleaners and temporary assembly lubricants at their ISO:9001 certified facility in Burlington, NJ. They are equipped with state-of-the-art manufacturing, packaging, and warehousing equipment, and an on-site laboratory for quality, analytical work, and research and development. IPC is dedicated to providing safe, high-quality cleaners and lubricants. All of IPC's products are made in the USA and are readily available worldwide.
